STABILIZER CATALOG

MODIFY STABILIZER

365 Archery's Modify Stabilizer features a ground breaking, patent pending design that allows each shooter to fully customize and tune the stabilizer to their individual setup and form. This innovative design using PBO material wires allows the archer to change the stabilizers spine, flex and direction of movement of flex at the shot. This give the option to go from super stiff stabilizer to a more limber stabilizer and also change flex direction at the shoot by tightening and loosing the wires. Also by the stabilizer using the wires not just the carbon tube to absorb shock it allows us to use a drastically smaller tube size of .40" and still maximize performance giving the archer drastically less wind resistance from the stabilizer. There is finally a stabilizer that you can Modify to your setup and your shooting form!

- AVAILABLE IN LENGTHS 6, 8, 10, 12, 15, 27, 30 INCHES

KO LITE STABILIZER

This stabilizer is made from a state of the art material that has been designed to take vibration and noise out of your bow. Comes in two models, one with the proven Mathews dampener technology and one with the stand along stabilizer. 5" in length.

365 BACK BAR

365 Archery's Back Bar Bracket Incorporates a quick disconnect design to allow for easy removal of your back bar. This design also allows for up/down and side to side adjustments with a solid clamping system to ensure your back bar stays where you want it.

BACK BAR BRACKET PRO

The Back Bar Bracket Pro gives you the ability to have 3rd axis adjustment of the stabilizer.

V-BAR BRACKET

The V-Bar Bracket allows a person to shoot a V-Bar system with 3rd axis adjustments quick disconnects and a rock solid clamping design to keep your back bars in the correct position.

GO PRO MOUNT

Will easily attach your go pro to and 365 DVS stabilizer or other manufactures stabilizer with a 5/16 mounting hole.

QUICK DISCONNECT/KNUCKLE

The 365 OD/Knuckle can be mounted to any bow so you can quickly and easily with a few twists disconnect your stabilizer from bow or fold it out of the way to put into your case.

10° DOWN ANGLE DISCONNECT

This OD/Knuckle has a 10° down angle built into the design.

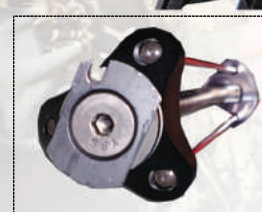

OFF-SET BRACKET

10° INDEX QUICK DISCONNECT

This OD has a 10° down angle built into the design.

INDEX QUICK DISCONNECT

The 365 Archery Index Quick Disconnect design allows precise alignment of stabilizer spine each and every time you connect and disconnect from bow. With conventional quick disconnects and just screwing on stabilizers an individual needs to be careful to have the stabilizer tightened the same so spine of stabilizer is lined up the same to the bow. Depending on the spine differential around the stabilizer tube it can create different directional torque if lined up different in relationship to the bow, that difference can change impact of grouping on the target. When using the Index Quick disconnect you just replace your stabilizer stud with index stabilizer bracket and put Quick Disconnect piece on your bow. This will allow easy on and off and also precise alignment on and off.

Index Quick Disconnect features a unique dovetail design.

WEIGHTS

High quality machined weights to work perfectly in conjunction with your favorite 365 stabilizer or other stabilizers accepting 5/16" thread. Available in 1oz and 2oz options.

STAINLESS STEEL WEIGHTS
